Education

Integrated M.Tech – Artificial Intelligence

VIT Bhopal University, Bhopal

2022 – 2027

CGPA: 8.51

Technical Skills

Generative AI & NLP: LLMs, LangChain, RAG Pipelines, Hugging Face Transformers, Prompt Engineering

Performance Marketing & Analytics: Google Ads, Meta Ads, Campaign Optimization, Dashboarding & Data-Driven Reporting

Machine Learning & Data Engineering: Vector Databases (ChromaDB), PyTorch, TensorFlow, Pandas, OpenCV, MediaPipe

AI Deployment & Backend: Python, C++, Django, Django REST Framework, RESTful APIs

Experience

Business Development Intern | Insell.io

The complete platform for AI sales automation

- Served as the primary point of contact for clients, managing relationships and translating technical AI automation capabilities into actionable business and marketing solutions.
- Managed outreach and marketing campaigns, leveraging the company's internal AI tools to automate workflows and optimize client engagement strategies.
- Analyzed sales pipeline data and campaign performance, surfacing key insights to improve product positioning and client onboarding processes.
- Collaborated cross-functionally within a fast-paced startup environment, utilizing strong communication skills to bridge the gap between AI development and client needs.

Projects

EduBot | Domain Constrained Conversational AI (Ongoing)

[Link](#)

(LangChain, LLMs, Django, ChromaDB, Flutter)

- Spearheaded chatbot development using LangChain and LLMs, targeting 3+ educational curricula via semantic search on ChromaDB.
- Optimized LLM agent performance and API rate-limit strategies on a Django + ChromaDB RAG backend, sustaining **99.95% system availability** under production load.
- Accelerated query response time by an estimated **35%** by integrating a Flutter frontend with retrieval-augmented generation over direct prompting.

Hindi AI Text Summarizer | Generative AI & NLP Deployment

[Link](#)

(mT5, Transformers, Django REST, Celery, Redis)

- Delivered an abstractive Hindi summarization pipeline with Google mT5-Base Transformer, achieving a high ROUGE-score fidelity across a **500+ sample** dataset.
- Architected a scalable model inference pipeline using REST Framework, enabling real-time NLP predictions and seamless frontend integration.
- Cut end-to-end inference latency by **40%** by introducing Celery-based async task queues backed by Redis, boosting throughput under concurrent user load.

Med-Matrix | Rule-Based Drug Interaction Checker

[Link](#)

(Python, Django REST, Combinatorial Logic, Pandas)

- Designed a rule-based interaction engine backed by 2 structured datasets – **drugs.csv** (brand names, active components, quantities) and **interactions.csv** (component pairs with side effects and severity levels).
- Implemented a brand-name-to-component resolution layer that maps user-selected medicines to their active salts, generates all C(n,2) component pairs, and cross-references them against **300+ known interaction records** to return severity-ranked warnings.

Achievements & Certifications

- **Amazon ML Challenge 2025:** Ranked **132 out of 80,000+ participants** nationwide, leveraging Python and advanced data processing frameworks under strict competitive constraints.
- **Microsoft Office Specialist: PowerPoint 2013** (Microsoft Certified) – May 2019 [Badge Link]
